

# What's the « documents » and « buddydrive » features

## Documents and Buddydrive

It is important to distinguish between the Documents and Buddydrive sections present in each group.

### Buddydrive

*Buddydrive* is a space for the deposit of various files, going from the pdf to the simple image. This space allows you to share small data with your group or to make them totally private or public.

Each file deposited can be classified in a subfolder.

### Documents

The *Documents* section will allow documents to be written only in text. It is similar to a wiki and will allow the group to quickly view or modify a text document shared with the group.

Like a wiki, each document can have a parent document. It is thus possible to create a document hierarchy.
